

# DUAL CAST DISC

The **Dual Cast disc** is an exclusive aftermarket solution from Brembo and available for the sportier models in the Audi, Alfa Romeo, Aston Martin, Maserati and Mercedes AMG ranges.

A fundamental characteristic of this type of disc is the **cast iron braking** surface and the **aluminum hat**, which combine the advantages of the way cast iron performs at high temperatures with the lightweight properties of the aluminum.

The disc offers a **weight reduction** of up to **30%** versus an integral disc of the same dimensions, resulting in a significant reduction in both consumption and car emissions.

The added functionality of the disc **withstanding permanent thermal deformations** (up to 70%) improves performance with **less residual torque and vibration**.
