

P 59 078 SUPERSEDED BY P 59 080

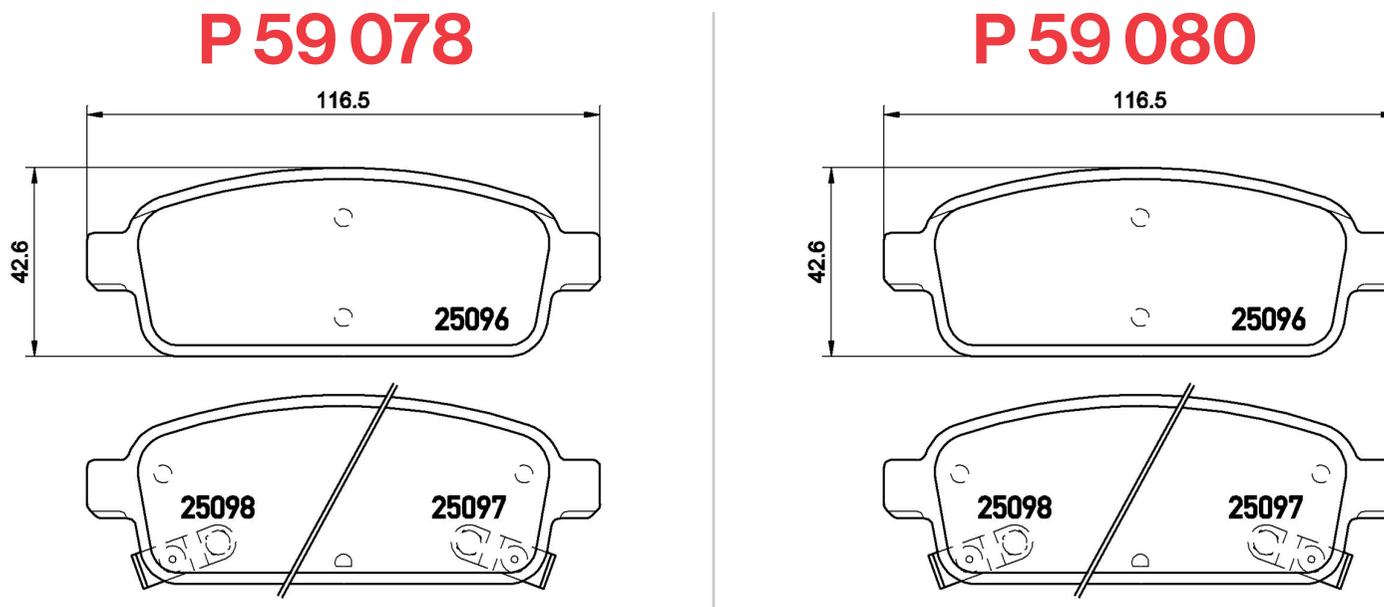

P 59 078 (WVA 25096-25097-25098) → P 59 080 WVA (25096-25097-25098)

The GM group released a new part number with a so called “Aftermarket specification” for their references corresponding to P 59 078 and P 59 080. With this new specification, it is possible to cover all applications of both references, and harmonize to one reference.

As we are always striving for improvements for our customers, we will follow this idea and will rationalize to only one reference, which will cover all applications for P 59 078 and P 59 080. Therefore we will replace P 59 078 by P 59 080. As a consequence of this, P 59 080 can now be used retrospectively for all applications of P 59 078 and P 59 080.

As you can see in the picture below there is no difference in the outer dimensions of the pad.

Also the accessories which are included in the box are the same. **The only difference is in the comfort measures.** P 59 080 will of course keep the comfort measures in order to guarantee its good performance.

Existing stock of P 59 078 can be sold out without any problem. Most common applications are Chevrolet Cruze 05/09- and Opel/Vauxhall Astra J 12/09-. The pad set is for rear axles with 15" rims.
